

AN7800R/AN78M00R Series

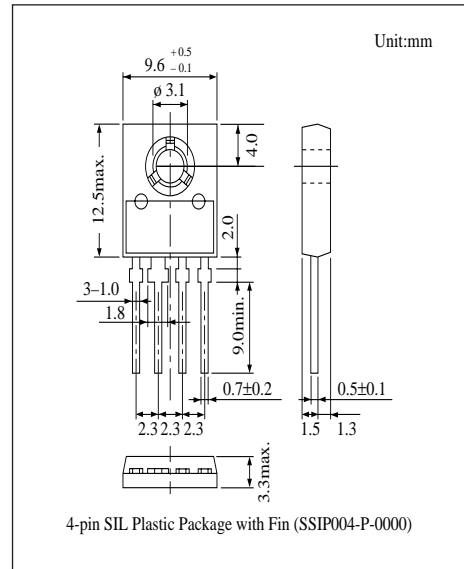

Positive Output Voltage Regulators with Reset pin (1A/500mA Type)

■ Overview

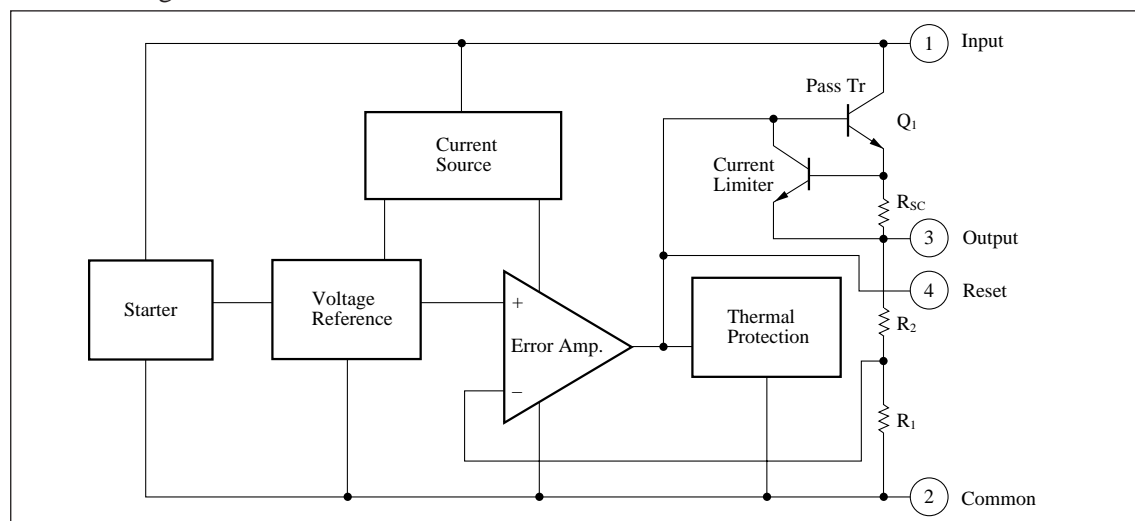

The AN7800R and the AN78M00R series are the fixed positive output voltage regulators with reset pin. Stabilized fixed output voltage is obtained from unstable DC input voltage without using any external components. Three types of output voltage, 5V, 9V and 12V, are available for the AN7800R series, and four types, 5V, 8V, 9V and 12V, are available for the AN78M00R series. They can be used in power circuits with current capacitance 1A/500mA. ON/OFF of output voltage can be controlled by the reset pin.

■ Features

- No external components
- Maximum output current :1A (AN7800R)
500mA (AN78M00R)
- Output voltage :5V, 9V, 12V (AN7800R)
:8V (AN78M08R)
- Short-circuit current limiting built-in
- Thermal overload protection built-in
- Output transistor safe area compensation
- ON/OFF of output voltage can be controlled by reset pin.

■ Absolute Maximum Ratings (Ta=25°C)

Parameter	Symbol	Rating	Unit
Input voltage	V_I	35	V
Power dissipation	P_D	10 *1	W
Operating ambient temperature	T_{opr}	-20 to + 80	°C
Storage temperature	T_{stg}	-55 to + 150	°C

*1 Follow the derating curve. When T_j exceeds 150°C, the internal circuit cuts off the output.

■ Characteristic Curve

■ Basic Regulator Circuit

* For TTL, an open collector type inverter, buffer, gate etc. can be used.

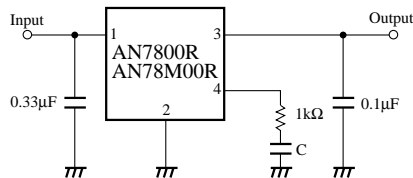

Beware of the breakdown of TTL, as the reset pin bears voltage higher than the output voltage V_O by 1—2V.

C_i is set when the input line is long.

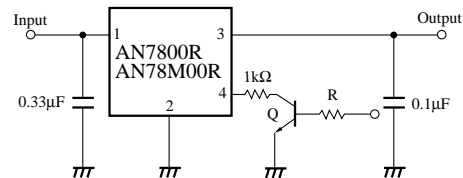

C_o improves the temperature response.

■ Application Circuit

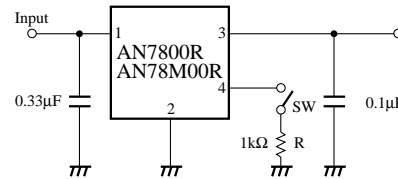

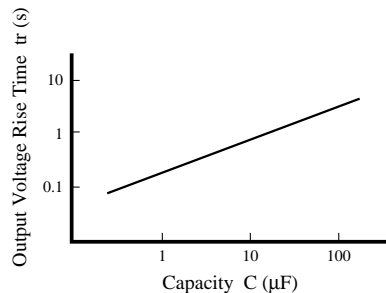

(1) Soft Start Circuit

(2) Several Output Reset Circuits

* Control of Output Voltage Rise Time
